Guide for Making Chapters 4 and 5

EMO Tracker (Capstone 2). Updated October 30, 2026: the user evaluation now has three ready forms (usability test, SUS, ISO/IEC 25010) and one scoring sheet.

What changed in this version

- **October 30: three ready forms.** The adviser chose **ISO/IEC 25010** (October 28), and the prof asked for usability testing questions, so the evaluation is a **usability test**, the **SUS** and the **ISO/IEC 25010 questionnaire**, scored in one sheet (`evaluation-scoring.xlsx`). See Section 5. Correction: the October 28 guide dropped the SUS; the adviser had only chosen between the two ISO standards.
- Objective 3's figures now follow the paper: **Figures 4.16 to 4.26**, so the questionnaire chart is **Figure 4.27**.
- Sections 1 and 8 still describe paper version 8; most of their items are now done.
- Checked against **paper version 8**. Most of the October 23 fixes are done; Section 8 lists what is still open, page by page.
- New test run on **October 26, 2026: 112 test cases, 530 checks, all passed**.
- New screenshots: **30** (the Export menu, full page and close-up) and **31** (the CSV export). **Figure 3.5** was redrawn with port 8000.
- Objective 3's figures are renumbered to add the CSV export: **Figures 4.16 to 4.25** (Section 4).
- New: **how to run the user evaluation** and compute the results (Section 5), and the **evaluation method section** the paper is missing (Section 6).
- **Correction:** copy each objective word for word and drop only "To" (Section 3). Some earlier fix lists said to keep "To"; follow this guide.
- The EMO has **four main members**: the Director, the Ministrong Tagasubaybay and two others (positions to confirm at the office).

Read this first

- The **order** of the parts follows the ZALIN sample. Everything inside the parts (screens, tests, numbers, features) is **EMO Tracker**.
- Codes like **G.2** and **G.7** point to the **reference file** (`docs/paper/CAPSTONE_PAPER_REFERENCE.md`), not to your paper. Open it in Notepad or VS Code and press **Ctrl + F** to search for the code.
- Copy every number from the reference file, a new test run or your own forms. **Never guess a number.**
- Write every paragraph in your own words (the paper must pass Turnitin at 90 to 94% human). Do not paste the reference file or this guide into your paper.
- Page numbers in this guide are from **paper version 8**. They move as you edit, so search for the words instead (**Ctrl + F**).

1. Where the Paper Stands (Version 8)

Part	Done	Still open
Title page	**Title fixed ("Task Management")**	Date "May 2026": ask the adviser (the defense is in November)
Front pages		Table of contents, List of Figures and List of Tables are outdated. Do them last (Section 8).
Chapter 1	**Introduction, Objectives 1 to 3, Scope, Limitations, Definition of Terms**	Office size (pp. 8, 11), the May 14 date (p. 8), "Excel or CSV" (pp. 9, 11), Objective 4 (p. 11)
Chapter 2	**Citations, typos, Synthesis indents**	Instrument and dates (p. 23); double spaces (pp. 18 to 20)
Chapter 3	**Input, Process, Output, Control, Table 1 page break, Table 2**	Office size (pp. 29, 36, 53), org chart (p. 30), pp. 38 to 39 and 57, Figure 3.5 image (p. 56), the evaluation method section (Section 6)
Chapter 4: Overview, Objectives 1 and 2	**All figures and paragraphs**	Objective sentences (pp. 65, 67), Export menu image (p. 70), Figure 4.15 caption (p. 82)
Chapter 4: Objective 3	**Figures and paragraphs for the reports, exports, uploads, accounts, login, import, backups and login limit**	Objective sentence, figure order, the CSV figure, two facts, the closing paragraph
Chapter 4: Objective 4	**Tables 4.1 and 4.3**	Objective sentence; Table 4.1 (header, four cells, paragraph); Tables 4.2, 4.4 and 4.5; **the user evaluation**
Chapter 4: opening		Write it last
Chapter 5		Section 7
References		Five entries (Section 8)

2. Outline of Your Chapter 4

Order	Part	What it shows for EMO Tracker
1	Opening paragraph	What the chapter covers, and that the objectives from Chapter 1 were addressed. Write it last.
2	Overview	The General Objective sentence, then the main screens of the whole system
3	Objective 1	Events, Schedule, statuses, venues, double-booking warning, tasks
4	Objective 2	Readiness labels with their reasons, and Analytics

5	Objective 3	PDF report, Excel and CSV export, uploads, roles, login protection, import, backups
6	Objective 4	Test results (tables), then the pilot and the user evaluation

Figure and table numbers

Number everything in order of appearance: **Figure 4.1, 4.2, 4.3...** and **Table 4.1, 4.2, 4.3...**. Your Chapter 3 uses Figures 3.1 to 3.5 (the other diagrams are appendix figures D.1 to D.8, E.1 to E.8, G.1 and G.2). Chapter 3's tables are "Table 1" and "Table 2" with the caption below, while Chapter 4's are "Table 4.1" with the caption above. Ask your adviser which pattern she wants, then use it everywhere.

3. The Routine for Each Objective

Step 1: Write the bold objective sentence

1. Copy the objective from Chapter 1 **word for word** (copy-paste, don't retype) and **drop only the opening word "To"**.
2. Put it in **bold**, on its own line, right before the first figure of that part.
3. Do the same with the **General Objective** for the Overview.

Part	Starts with (Chapter 1's words, without "To")	In paper version 8
Overview	"Develop and evaluate EMO Tracker, a responsive web-based application..."	**p. 65 starts "An EMO Tracker..."**
Objective 1	"Design an event planning, task tracking and scheduling feature..."	**p. 67 starts "An event planning..." It also says "Venue booking" (Chapter 1: "venue booking") and lists the task items in a different order.**
Objective 2	"Develop a readiness classification feature..."	p. 78 is right, except "which venues" should be "which Venues", as in Chapter 1
Objective 3	"Implement a records and data protection feature..."	**Missing: add it before Figure 4.16 (p. 83)**
Objective 4	"Evaluate EMO Tracker with three users from the EMO..."	**p. 91 starts "To evaluate... the three users", isn't bold, and still has the "[restate objective 4]" label**

Two notes

If your adviser prefers to keep "To", keep it in all five. In **Chapter 1**, Objectives 1 to 3 are not bold but Objective 4 is: remove the bold there, so all four look the same.

Step 2: Show each feature, one at a time

1. Insert the screenshot, then the caption, for example **Figure 4.5: Schedule page**.
2. Write a paragraph after it that starts with **"Figure 4.5 shows..."**
3. Say what the screen is, what the user can do, and **one detail that matters** (a rule, a color or a warning). Keep it to 3 to 5 sentences.
4. Check every claim against the screenshot and the role rules: only the **Administrator** adds, edits, cancels and deletes events, manages venues and accounts, and deletes documents. **Officers** manage tasks, upload documents, export the Schedule and see Analytics. **Staff** view and update their own tasks.

Step 3: Close each objective

End each objective with a short paragraph that starts **"Overall, Objective __ was met."** and says which figures show which part. Objectives 1 to 3 have one in the paper. Objective 4's comes after the evaluation.

Step 4 (optional, after the survey): add user results to a part

Only if your questionnaire has statements about that part's features: add the mean scores for those statements and say where they fall on your interpretation scale (Section 5).

Optional: real data from the EMO's schedule (G.7), totals only

- **Objective 1** (already on pp. 77 to 78): first check, 13 overlapping pairs (9 still upcoming on October 6) and about 80 spellings for about 25 venues; latest sheet, 14 overlapping pairs in 2026 (6 still upcoming on October 23) and 29 venues.
- **Objective 2:** Analytics, This year 2026: 372 events (89 upcoming, 281 completed, 2 cancelled), 10 rescheduled, busiest venue University Hall (108). No real event is marked "EMO prepares this event" yet.
- **Objective 3:** first import (October 2): 329 events, 221 values made consistent. Final import (October 20): 391 events from 401 rows, 10 reschedule pairs merged, 64 rows listed for a person to review.
- Never include names or other details of the EMO's real events.

4. What Goes in Each Part

The screenshots are in `docs/paper/screenshots`, in folders by role. They show the **demo data** on October 9, 2026, never the EMO's real data. Screenshots 30 and 31 were made on October 26 from the same demo data, with the clock set to October 9, so they match the others.

Overview, Objective 1 and Objective 2

Figure	Screenshot (folder)	Caption idea	Status
4.1	04 (2-administrator)	Administrator Home	**Done**
4.2	21 (4-staff)	Staff Home on a phone	**Done**

4.3	05 (2-administrator)	Events page, calendar view	**Done**
4.4	14 (2-administrator)	Events list on a phone	**Done**
4.5	06 (2-administrator)	Schedule page	**Done**
4.6	08 (2-administrator)	Edit event form with the reschedule question	**Done**
4.7	07 (2-administrator)	New event form with the double-booking warning	**Done**
4.8	10 (2-administrator)	A cancelled event	**Done**
4.9	11 (2-administrator)	Venues page	**Done**
4.10	17 (3-officer)	Adding a task	**Done**
4.11	22 (4-staff)	My tasks	**Done**
4.12	19 (3-officer)	Completed event panel with locked tasks	**Done**
4.13	09 (2-administrator)	Event panel with the readiness label	**Done**
4.14	20 (3-officer)	Analytics page	**Done**
4.15	`diagrams/readiness-flowchart.png`	Readiness classification rules	**Done**

To replace an image in Google Docs: right-click it, **Replace image**, **Upload from computer**. It keeps the size and position. Use the full-page `30-export-menu.png`; the close-up is a spare.

Objective 3

Figure	Screenshot (folder)	Caption	Status
4.16	25 (5-reports)	PDF event report	**Done**
4.17	30 (5-reports)	Export menu	**Done**
4.18	26 (5-reports)	Schedule exported to Excel	**Done**
4.19	31 (5-reports)	Schedule exported to CSV	**Done**
4.20	18 (3-officer)	Uploading a document to an event	**Done**
4.21	12 (2-administrator)	Accounts page	**Done**
4.22	02 (1-all-roles)	Login page after a wrong password	**Done**
4.23	24 (4-staff)	Event panel for Staff: view only	**Done**

4.24	27 (6-data-protection)	Spreadsheet import check (dry run)	**Done**
4.25	28 (6-data-protection)	Automatic daily backups	**Done**
4.26	29 (6-data-protection)	Login limit message	**Done**

Screenshots for a user manual instead (they don't prove an objective by themselves): 01 Login page, 03 Change password, 13 Adding an account, 15 Schedule on a phone, 16 Officer Home, 23 My events. Ask your adviser if the paper has a user manual appendix.

5. Objective 4: Testing and the User Evaluation

Write the bold objective sentence first, then the testing tables, then the pilot and the user evaluation. After every table, write a paragraph (see 5.4).

5.1 Tables from our own testing (you can write these now)

Table	What it shows	Facts	Status
4.1	Automated tests: 112 test cases in 16 files (530 checks), all passed. Last run October 26, 2026; run them again before the defense and use that date.	G.2	**Done**
4.2	Code quality and security checks	G.3 and the October 26 run (below)	**Done**
4.3	Browser checks	G.4	**Done**
4.4	Load check	G.5 (October 26 check)	**Done**
4.5	Pre-defense audit: what was found and what was fixed	G.6 (copy its table)	**Done**

Table 4.1, what's left:

- Rename the column header "Case s" to **Tests**.
- Fill the four empty "What it checks" cells, in the same "Checks if..." style as the other rows:
  - **VenueManagementTest:** only the Administrator can manage venues and buildings; a venue in use can't be deleted; merging venues moves their events.
  - **EventClassifierTest:** each readiness rule gives the right label and reason in 15 situations; cancelled, completed and not-prepared events get no label (15 + 3 = 18 tests).
  - **AnalyticsTest:** the status counts add up to the total; the time periods work; Staff can't open Analytics.
  - **DashboardTest:** Home shows the events that need attention and the next 7 days; Staff see only their own open tasks.

- Replace "[ADD SENTENCE AFTER EXPLAINING ABOUT THE TABLE]" with your own paragraph. Facts: 45 tests for Objective 1, 25 for Objective 2, 40 for Objective 3 and 2 general; the rules behind the schedule, readiness, records, roles and backups work as designed; these tests check the server, so the screens were checked separately in Table 4.3.

Table 4.2 facts (checks run again on October 26, 2026):

Check	Result
Laravel Pint (PHP code style)	Passes
ESLint (JavaScript code checks)	0 problems
Frontend build	Passes
composer audit (PHP packages)	0 advisories
npm audit (JavaScript packages)	0 vulnerabilities, after three packages with advisories published after October 7 (follow-redirects, vite and zod) were updated on October 26

Earlier in Capstone 2, package updates took Composer from 44 advisories to 0 and npm from 11 vulnerabilities to 0 (G.3).

Table 4.4 uses the second load check (G.5, October 26, 2026): a MacBook Air (M1, 8 GB) running the same server program as the EMO's laptop, with a test database of 400 events. Every page answered within about a tenth of a second, and 8 people opening the Schedule at once were all answered within half a second. The copy-ready table is `table-4.4-load-check.html`.

5.2 The user evaluation: three forms (all ready)

Each EMO user does all three in one session of about 40 minutes, in this order, and all three forms get the same Respondent No. The blank forms go in Appendix B (Research Instruments); the answered forms go in Appendix C, with no names. All files are in `docs/paper/chapter-4`.

Order	Form	File	What it measures	In Chapter 4
1	Usability test	`usability-test.html` (facilitator guide and one task sheet per role)	Can users do real tasks: completed or not, how long, and how easy each task was	Table 4.6
2	System Usability Scale (SUS)	`sus-questionnaire.html` (1 page)	How easy the whole system felt, as one score from 0 to 100	Table 4.8
3	ISO/IEC 25010 questionnaire	`iso25010-questionnaire.html` (3 pages)	The system's quality on 7 characteristics, plus comments	Table 4.7, Figure 4.27

Step-by-step plan for the visit (setting up the MacBook's demo data, the order of each session, and what to do after): `evaluation-checklist.md` in the same folder.

Each file prints with **Cmd+P** and has a **Copy** button for pasting into Appendix B. All three forms use the same scale direction: 1 = Strongly Disagree on the left, 5 = Strongly Agree on the right.

1. Usability test. 17 tasks written as real situations: Administrator 1 to 7, Officer 8 to 13, Staff 14 to 17 (based on the 17 tasks in Appendix F of the reference file). It runs on the MacBook with the **demo data**, because the EMO's real schedule has no prepared events or tasks yet, and the test shouldn't add practice records to it. After each task the observer asks, "This task was easy to do," from 1 to 5. The test measures usability three ways: effectiveness (tasks completed), efficiency (time) and satisfaction (the ease ratings and the SUS).

2. SUS. The 10 standard statements, word for word. Don't reword them: the score depends on the original wording and on the mix of positive and negative statements. Add the source to the References: Brooke, J. (1996). SUS: A "quick and dirty" usability scale. In P. W. Jordan, B. Thomas, B. A. Weerdmeester, & I. L. McClelland (Eds.), *Usability evaluation in industry* (pp. 189–194). Taylor & Francis.

3. ISO/IEC 25010 questionnaire (the adviser's choice, October 28). Part I is the respondent profile, Part II has 22 statements, and Part III has 3 comment questions.

Characteristic (ISO/IEC 25010:2023)	Statements	What its statements ask
Functional suitability	1 to 3	Does it have the features the EMO needs, and are the records and readiness labels correct?
Performance efficiency	4 to 6	Do pages open and save quickly, even with several users?
Compatibility	7 to 9	Does it work beside other apps, and do the Excel, CSV and PDF files open correctly elsewhere?
Interaction capability (usability)	10 to 13	Is it easy to understand, learn and use, and does it guard against mistakes?
Reliability	14 to 16	Did it work without errors, was it available, and did it recover from problems?
Security	17 to 19	Only accounts get in, each role does only its job, completed records are protected
Flexibility	20 to 22	Does it work on phones, laptops and their browsers without installing anything?

- **Left out:** Maintainability (office users can't judge the code; only IT experts could) and Safety (the system can't harm anyone physically). If the adviser wants IT experts too, they need a separate form.
- "Interaction capability" is the 2023 name for usability, and "Flexibility" replaced portability. The questionnaire shows "Interaction Capability (Usability)" so readers know both names.
- Change any wording the adviser asks for in both the questionnaire and the scoring sheet. Cite the standard as the paper already does: ISO/IEC 25010:2023.

5.3 Running it and computing the results

1. **Before:** the adviser and the prof check all three forms. Print, for each user, their role's task sheet, the SUS and the ISO/IEC 25010 questionnaire; print the facilitator guide for the observers.

2. **At the session:** follow the facilitator guide (page 1 of the usability test). One proponent reads the tasks and keeps time; another writes. Write the real date on every form.
3. **After:** type everything into `evaluation-scoring.xlsx` (Excel or Google Sheets): the Usability test, SUS, ISO ratings, Respondents and Comments tabs. It computes everything; check the numbers against the paper forms.

Usability test: completion rate = tasks completed without help ÷ tasks recorded × 100 (the sheet also shows the rate with help). Report the average time and the average ease rating, read on the scale below.

Rating scale (ease ratings and ISO/IEC 25010): use frequency, percentage and the weighted mean (slide 16). With three respondents, don't use other statistical tests.

$$\text{Percentage: } P = f \div n \times 100$$

$$\text{Weighted mean: } \bar{x} = \Sigma fx \div n$$

Here *f* is how many gave a rating, *x* is the rating and *n* is the number of respondents. Example: ratings of 5, 4 and 5 give 14 ÷ 3 = 4.67, Strongly agree. A characteristic's mean is the average of its statements' means; the overall mean is the average of the characteristic means.

Mean	Description	Interpretation
4.21 to 5.00	Strongly agree	Excellent
3.41 to 4.20	Agree	Very good
2.61 to 3.40	Neutral	Good
1.81 to 2.60	Disagree	Fair
1.00 to 1.80	Strongly disagree	Poor

Ask the adviser which labels she wants.

$$\text{SUS score} = 2.5 \times [\ \Sigma(\text{odd-statement rating} - 1) + \Sigma(5 - \text{even-statement rating})\ ]$$

The score is computed for each respondent (0 to 100; it is not a percentage), then averaged. A score of **68** is the usual average, already cited in Chapter 2 (Hyzy et al., 2022). **Comments:** type them into the Comments tab word for word, make categories (for example ease of use, speed, missing features, problems), label each comment and write the patterns. Don't turn comments into numbers (slide 15).

5.4 What goes in Objective 4, in order

1. The bold objective sentence (Section 3).
2. Tables 4.1 to 4.5, each followed by its paragraph.
3. **The pilot:** who took part (three users and their roles, no names), where, the real dates, and what they did.
4. **Table 4.6:** usability test results: each task with Completed, Time and Ease (the scoring sheet's Usability test tab), then the completion rate and the average ease.
5. **Table 4.7:** ISO/IEC 25010 results (the "Table 4.7" tab), and **Figure 4.27**, a bar chart of the seven characteristic means (the chart on the same tab).

6. **Table 4.8:** SUS results: each respondent's score, the average, and how it compares with 68 (the SUS tab).
7. **Comments:** one paragraph on the categories and patterns.
8. **Problems found** during the tests and what you did about each one.
9. **Limits:** three users, demo data on the MacBook, one office, so the results describe the EMO only (slide 17).
10. **"Overall, Objective 4 was met."** Only if the results support it; if a task failed or a characteristic scored low, say so.

Table 4.7 layout	Mean	Interpretation
Functional suitability (the characteristic's mean, in bold)	—	—
Statement 1	—	—
Statement 2	—	—
(the other six characteristics the same way)		
Overall mean	—	—

Table 4.8 layout: Respondent	Role	SUS score
Respondent 1	Administrator	—
Respondent 2	Officer	—
Respondent 3	Staff	—
Average (compared with 68)		—

The paragraph after each table has three parts

1. Presentation: what the table shows ("Table 4.7 shows..."). 2. Analysis: the numbers that matter, such as the highest, the lowest and the overall result; comparing says more than one number alone (slide 14). 3. Interpretation: what it means for the EMO and, where it fits, how it relates to a Chapter 2 study (Sancho and Melendres, 2021, also used ISO/IEC 25010; Hyzy et al., 2022, give the SUS average of 68).

6. The Evaluation Method Section (Missing From the Paper)

Chapter 4 only reports results, so the paper must first say how the evaluation was done: who answered, with what form, in what steps, and how the answers were computed. No chapter does this yet.

Where: following the ZALIN sample, at the end of Chapter 3, after Technical Feasibility. The instructor's slides call Chapter 4 "Methodology, Results and Discussion", so the adviser may want it at the start of Chapter 4 instead. Ask her; the content is the same either way.

Heading	What to write	Facts to use
Testing and Evaluation	2 or 3 sentences: the proponents tested the system, then EMO users evaluated it	
Testing Procedure	The kinds of testing whose results are Tables 4.1 to 4.5	112 automated tests (`php artisan test`); code quality and security checks; browser checks in Chrome at desktop and phone sizes; load check; pre-defense audit
Respondents	Who answered, how many, how they were chosen	3 EMO users, one per role, chosen on purpose because they use the system (purposive sampling); if all four members answer, it is total enumeration
Research Instrument	The three forms and their parts	Usability test: 17 task scenarios by role, with completion, time and a 1-to-5 ease rating after each task; SUS: the 10 standard statements (Brooke, 1996); ISO/IEC 25010 questionnaire: Parts I to III, 22 statements on 7 ISO/IEC 25010:2023 characteristics. All use a 5-point agreement scale; all in Appendix B
Data Gathering Procedure	Numbered steps in the order they happened, with dates	Adviser and prof checked the forms; consent; the usability test on the MacBook with demo data (facilitator guide); then the SUS; then the ISO/IEC 25010 questionnaire; forms collected
Statistical Treatment of Data	How the answers were computed and read	Completion rate (percentage); average time; frequency and percentage (profile); weighted mean formula; characteristic and overall means; the interpretation scale table; the SUS formula and the benchmark of 68; comments grouped into categories

The "Population of the Study" part already in Chapter 3 stays where it is: fix it to the EMO's four main members, and have "Respondents" refer to it. If the adviser wants the questionnaire validated, say who checked it before it was used.

7. Chapter 5: Conclusions and Recommendations

Use the headings your adviser wants, written in paragraphs with no bullet lists. Do not claim user satisfaction before the survey is done.

- **Summary of Findings** (only if the adviser wants it; slides 18 to 23): one short statement of the purpose, respondents, period, method, instrument, sampling and statistics used, then the findings for each objective, with numbers only, no explanations and no new data.
- **Conclusion** (about 4 paragraphs): (1) what EMO Tracker is and that it achieved its objectives; (2) Objective 1: the three views, automatic statuses, venues, double-booking warning, tasks with one owner and the lock, the overlaps found in the real schedule (13 pairs, then 14), and the 45 passing

tests; (3) Objectives 2 and 3: readiness with reasons and Analytics (25 tests), then the PDF report, Excel and CSV export, uploads, the import (391 events), daily backups, login and role protection (40 tests); (4) Objective 4: what the EMO's users said, after the survey. Say whether the results met your expectations and how they relate to the Chapter 2 studies. Don't write "In conclusion" or add new information (slides 24 to 26).

- **Recommendation** (about 5 or 6 paragraphs, one idea each; slides 27 to 28): start with what your results or limitations showed, then what to improve. Pick from email or SMS notifications, an activity log, recurring events and templates, restoring a backup inside the app, readiness thresholds tuned after the pilot, hosting beyond one laptop, and testing with more users over a longer time (more ideas: H.3 in the reference file).

8. Fixes Still Open in Paper Version 8

Use **Ctrl + H** (Find and replace) with the words in the "Find" column. Items marked **After the visit** need facts from the office.

Page	Find	Replace with, or do	Why
1	May 2026	Ask the adviser	The defense is in November
8	which has approximately 5 main members	which has four main members	Office size
8	schedule spreadsheet on May 14, 2026.	schedule spreadsheet. (or the real date from Appendix C)	May 14 was the pre-oral defense
9	a PDF report and Excel export of the Schedule	a PDF report and an Excel or CSV export of the Schedule	CSV was added
11	exporting the Excel file of the Schedule	exporting the Schedule as an Excel or CSV file	Same; then copy it into the Objective 3 sentence
11	Objective 4	Remove the bold; fill in the instrument and the real dates (**after the visit**)	If the forms are answered after October 24, it can't say "during the 3-day pilot"
11	approximately 5 EMO members	the EMO's four main members	Office size
18 to 20	(two spaces)	(one space), then **Replace all**	Double spaces left in Chapter 2
23	[TO CONFIRM: SUS] ISO/IEC 25010 / (October 22 to 24, 2026)	A usability test, the SUS and ISO/IEC 25010; the real dates **after the survey**	Must match Objective 4

29	comprising approximately eight (8) to ten (10) personnel, which includes the Director, a Monitoring Minister (Ministrong Taga-subaybay), a Secretary, and the Tech Support staff.	of four (4) main members, including the Director and a Monitoring Minister (Ministrong Taga-subaybay). Add the other two positions **after the visit**.	Office size
30	Organizational Chart paragraph and Figure G.1	Rewrite **after the visit**; Xyrone redraws Figure G.1	They show a Secretary and five Tech Support
36	the projected user base of approximately ten (10) concurrent users	the EMO's four (4) main members using it at the same time	Office size
38 to 39	the Director, the Monitoring Minister, the Secretary, and the Tech Support staff	The real positions (**after the visit**). Also tone down claims nothing backs up: "expressed a strong willingness", "fully equipped", "absolutely no restructuring".	Accuracy
40	the 3-day pilot testing from October 22 to 24	The real dates (**after the visit**); Xyrone redraws Figure G.2	Gantt chart
53	(about 5–10 members)	(four main members)	Office size
56	Figure 3.5 image	Replace it with `docs/paper/diagrams/network-topology.png`	The old image says port 5173
57	Tech Support staff are restricted... / only the Director, functioning as the System Administrator	The real positions (**after the visit**)	Accuracy
65, 67, 78, 91	The objective sentences	Section 3	Must match Chapter 1
70	Figure 4.5 image; "[Add export pop up]"	Replace the image with `30-export-menu.png` ; delete the placeholder	The adviser asked for the Export menu
81 to 82	Figure 4.15	Shrink the flowchart until its caption fits on p. 81	Caption separated from its figure
83 to 90	Objective 3 figures	Add the Objective 3 sentence before Figure 4.16; renumber and move figures (Section 4); add the closing paragraph (Section 3)	Missing parts and order
88	Users can attach supporting files	Officers and the Administrator can attach supporting files	Staff can't upload
87	While administrators and officers can modify the event's core details	While only the Administrator can edit the event's details	Officers can't edit events

87	and the full task list to monitor the event's progress.	and the full task list, and they can update the status of their own tasks.	The screenshot shows their own tasks' status menus
83 to 88	Figures 4.16 to 4.21 paragraphs	Reword phrases like "maintain a complete, printable record", "strict deletion rules ensure" and "dictates their permissions and access levels" in your own words	Turnitin's AI check flags this style
91 to 93	Table 4.1	Header, four cells and the paragraph (Section 5.1)	Unfinished
94	Table 4.2	Fill it (Section 5.1), then add Tables 4.4 and 4.5 after Table 4.3	Unfinished
96	[Close the objective...]	After the evaluation (Section 5.4)	Unfinished

Front pages (do these last):

- The "LIST OF FIGURES" page holds a second, automatic table of contents, not a list of figures, and the real table of contents (pp. 2 to 3) is typed by hand with wrong page numbers. Delete the typed one, move the automatic one under TABLE OF CONTENTS, and click its refresh button.
- Figure titles show up inside the table of contents ("Prototyping Model Diagram of EMO Tracker" and others) because they are styled as headings. Set each to **Normal text**, then make it bold and centered again. Give "Chapter 4 / RESULTS AND DISCUSSION" the same heading style as the other chapter titles.
- Type the List of Figures by hand at the end (Figures 3.1 to 3.5 and 4.1 to 4.26), and update the List of Tables (Table 1 is on p. 54, Table 2 on p. 64, plus Chapter 4's tables).

9. Questions Before the Office Visit

Ask the adviser	Confirm at the office
• ~~ISO/IEC 25010 or ISO 9126?~~ Answered October 28: ISO/IEC 25010. The prof also asked for usability testing questions (usability test and SUS added October 30). • Can she check the questionnaire wording? • Which interpretation labels? • Evaluation method section: end of Chapter 3, or start of Chapter 4? Chapter 4's title? • IT experts as extra evaluators? • Interview needed, or open-ended questions enough? • Summary of Findings in Chapter 5? • Table numbering pattern (Table 1 or Table 3.1), and the title page date? • Can she check the forms before the EMO answers them?	• The positions of the two other main members, and each user's role in the system • The real pilot dates (installed October 20; testing from October 21) • When the EMO can do the checklist and questionnaire • Whether they used phones, and which browsers • Where the backups are saved on their laptop (p. 55 says a USB drive) • The interview and observation date, if Appendix C doesn't have it

10. Checklist

Start now (doesn't need the survey)

- [ ] Fix the objective sentences (Section 3) and the Chapter 1, 2 and 3 items in Section 8 that don't need the visit
- [ ] Replace the Figure 4.5 and Figure 3.5 images
- [ ] Add the Objective 3 sentence, the CSV figure, the new order and numbers, the two fact fixes and the closing paragraph
- [ ] Finish Table 4.1, and write Tables 4.2, 4.4 and 4.5 with their paragraphs
- [ ] Send the adviser the questions in Section 9
- [ ] Show the three forms to the adviser and the prof, then print them
- [ ] Draft the evaluation method section (everything except the dates)
- [ ] Fix the five references

After the visit and the survey

- [ ] Fill in the office size, positions, instrument and real dates (Chapters 1 to 3); Xyrone redraws Figures G.1 and G.2
- [ ] Type the answers into evaluation-scoring.xlsx and check them against the forms
- [ ] Write Tables 4.6 to 4.8, Figure 4.27 and the rest of Objective 4 (Section 5.4)
- [ ] Write Chapter 5 and the opening paragraph of Chapter 4
- [ ] Rebuild the table of contents, List of Figures and List of Tables

- [ ] Run the tests again, check every number and date, then do the Turnitin check as your school requires
